

# Palliative Care: A Must in Cancer Treatment

## What is Palliative Care?

Palliative care is specialized medical care that focuses on improving the quality of life for people with serious illnesses like cancer. It helps ease pain, discomfort and emotional distress through:

Pain and symptom relief

Emotional and spiritual support

Good nursing care

**It should be part of cancer treatment at all stages,  
even when a cure is not possible.**

***Palliative care is not an option—it is a necessity.  
It must be woven into the very fabric of cancer care.***
